

Project Management Training

Successful projects begin with perfect preparation.
Join Group-IPS employees and customers taking their
businesses to the next level.

Transform your projects with proven IPS methodology

Three times a year, Group-IPS internal-external project management training sessions introduce motivated individuals and groups to our proven methodology. The event is intended for early-career or experienced project managers and other professionals working on industrial projects, including production and maintenance managers, plant managers, financial managers, purchase managers, and bankers.

With our more than 30 years of insight and experience, we provide your team with the knowledge and tools to become more confident in preparing industrial projects. You'll learn to successfully prepare and manage projects in a cost-effective and time-efficient manner and to work proactively within a team. At the end of the training, you'll have a clear understanding of each step in successfully preparing an industrial project for the realization phase.

Intensive, hands-on training

Each day of the week-long event begins with theoretical classes and presentations to provide background knowledge and present all necessary methods, documents, and tools. Within the first three days, participants perform the complete project preparation of an industrial production facility. Their goal is to get funding approval by the project investor on Wednesday.

The latter half of the week is adapted as trainers see fit. Particular emphasis is placed on basic internal training (planning, procurement, and contracting), and participants receive additional insight into how we at IPS manage projects and how our method compares with that of other companies. In the evenings, social events—including a wonderful concert on Thursday evening—give team spirit a significant boost.

Budget
Masterplanning

Day 3 – Investment Approval

WEDNESDAY

Business Plan
Project Strategy
Detailed Time Schedule

Day 4 – Methodology

THURSDAY

Procurement
Permitting
Initiation of the Project Realization
Phase

Day 5 – Conclusion

FRIDAY

Visit of Major Industrial Site

References

"I used the opportunity to send my team...six years ago, and I must say that my team is still using the skills gained there in their everyday work.

I appreciated the 'teambuilding' element, which helped to bind the 3B Fibreglass and Group-IPS project teams together. It supported the project we were preparing together. This is the only hands-on training to be offered by a project management firm I know."

Jochen Krieg
Manager Engineering
Constellium

"Perfect project preparation is the foundation for a successful project.' The IPS Project Preparation Training has convinced me entirely. A perfectly organised mix of theory, practice, and teambuilding events.

The knowledge taught by very competent trainers is transferred into practice in parallel with project teams working on a realistic project case study. We thoroughly recommend the training and have frequently supported the participation of our employees for several years now. It's a benefit for our newcomers but also for experienced project engineers."

Transport to and from Berlin provided by IPS
Get in touch with us for help with your travel planning

Fee

EUR 3,000 per participant including lodging and catering (excl. VAT)

Catering

Coffee and refreshments during the training
Lunch and dinner

About Group-IPS

Group-IPS (Industrial Projects Services) builds confidence in the projects that improve our economies and our world.

Founded in 1992 in Belgium, IPS grew rapidly from a one-man project into a team of more than 300 highly skilled project engineers across more than 20 countries and four continents. With expert project management and engineering and a road-tested methodology, we provide the comprehensive support that gives companies the freedom to focus on their strengths. To date, we have successfully realized more than 2,500 projects around the globe.

Technological Center

Opened in 2002, the Technological Center (TC) serves as the project management school for Group-IPS employees and customers. It is equipped with the latest “plug-and-play” technologies and hosts trainings, seminars, site visits, and a diverse program of additional events.

The TC can be found in the small city of Eisenhüttenstadt, just south-east of Berlin in the center of Europe. The region offers pristine nature and abundant possibilities for cyclists, especially along the Oder river.

From the first spark of inspiration to the final moment of production
